

Synthetic AI System Inventory

Six governed Project W.I.N.G. use cases - complete inventory and assumption traceability

Document version	1.0
Status	Portfolio Baseline - Synthetic
Organization	Duckworks (fictional)
Scope	AI-001 through AI-006; AI-007 Unregistered GenAI Usage excluded from this six-system inventory
Data boundary	Fictional, synthetic, anonymized, or public information only
Purpose	Provide a CSV-ready, auditable AI system inventory with owners, vendors, data categories, lifecycle stages, risk indicators, monitoring requirements, governance decisions, and assumption IDs.

Portfolio use only. This report is not legal advice, certification evidence, or a statement of regulatory conformity.

1. Executive Summary

This report creates a synthetic AI system inventory for the six registered Duckworks use cases AI-001 through AI-006. AI-007 Unregistered GenAI Usage is intentionally excluded because the Duckworks assumptions treat it as an organizational condition containing multiple uncontrolled use cases rather than one homogeneous approved AI system.

The inventory preserves the established Duckworks purposes, owners, lifecycle gates, internal impact indicators, and human-oversight boundaries. Fictional vendor names and implementation details were added only where the existing portfolio did not establish them; these additions are explicitly controlled through new Open assumptions ASM-025 through ASM-030.

Inclusion in this inventory does not mean unrestricted production approval. DuckDesign AI, WingInspect Vision, and PondGPT remain restricted pilots; QuackBot remains production-blocked pending governance gates; FeatherForecast may continue in production with monitoring; and DuckTalent AI must not be deployed in its current state.

The values Moderate, High, and Critical are Duckworks internal governance / impact indicators. They are not legal classifications and must not be interpreted as a determination that a system is or is not a high-risk AI system under the EU AI Act.

1.1 Portfolio Snapshot

Metric	Count	Interpretation	Governance significance
Registered systems	6	AI-001 through AI-006	All six have named owners and traceable assumptions.
Restricted pilots	3	DuckDesign; WingInspect; PondGPT	Pilot use only until specified controls/evidence are validated.
Production / operational	1	FeatherForecast	Continue with manager approval and monitoring controls.
Production / deployment blocked	2	QuackBot; DuckTalent	Cannot proceed to unrestricted production in current state.
High impact indicators	4	DuckDesign; QuackBot; WingInspect; PondGPT	Enhanced governance, evidence, and pre-production gates.
Critical impact indicators	1	DuckTalent	Deployment blocked pending material risk reduction and enhanced review.

1.2 Inventory Design Principles

- Intended purpose first: records describe what each AI system is intended to do and the decision/support boundary around that use.
- Named accountability: every governed system has a business owner and technical owner drawn from the Duckworks stakeholder model.
- Human oversight is explicit: consequential employment, engineering, manufacturing quality, customer, and supply-chain decisions retain documented human authority.
- Third-party details are traceable: fictional vendors and platform arrangements are marked through Open assumptions rather than silently treated as established facts.
- Risk and legal classification are separate: Duckworks internal ratings support proportional governance but do not determine statutory classification.
- Evidence-driven change control: material changes in purpose, model, data, vendor, affected population, permissions, or decision authority should trigger reassessment.

2. Condensed Inventory

ID	System	Function	Business owner	Lifecycle	Impact	Approval / gate
AI-001	DuckDesign AI	Product & Engineering	Felix Duckson - VP Product & Engineering	Restricted Pilot	High	Conditionally approved for restricted pilot only; production design use prohibited without required validation gates
AI-002	QuackBot	Customer Operations	Clara Duckley - Director of Customer Operations	Pre-Production / Production Blocked	High	Production not approved pending prompt/RAG security testing, escalation controls, content boundaries, and monitoring
AI-003	FeatherForecast	Supply Chain & Manufacturing Planning	Tobias Duckman - Director of Supply Chain	Production / Operational	Moderate	Approved to continue in production with documented monitoring and manager approval for material commitments
AI-004	WingInspect Vision	Manufacturing & Quality	Henrietta Duckwell - Director of Manufacturing	Restricted Pilot	High	Conditionally approved for restricted pilot only; no unvalidated safety-critical reliance
AI-005	DuckTalent AI	Human Resources	Beatrice Van Duck - Chief People Officer	Pre-Deployment / Deployment Blocked	Critical	Do not deploy in current state; deployment blocked until critical risk is reduced and enhanced governance gates are satisfied
AI-006	PondGPT	Enterprise IT & Employee Productivity	Oliver Duckett - Head of IT & Cloud	Restricted Pilot	High	Conditionally approved for restricted pilot only; broader rollout blocked until access, logging, RAG security, and acceptable-use controls are validated

Note: the condensed table is a management view. The system profiles below contain the complete CSV-ready field set.

3.1 AI-001 - DuckDesign AI

Restricted Pilot | Internal impact indicator: High

AI ID	AI-001
System name	DuckDesign AI
Business function	Product & Engineering
Intended purpose	Assist engineers with design generation; component optimization; material selection; CAD workflows; simulation support; and comparison of alternative mechanical-arm designs
Business owner	Felix Duckson - VP Product & Engineering
Technical owner	Dr. Ada Duckfield - Head of Data & AI
AI technology	Generative AI; engineering decision-support; computational design
Development model	Duckworks-developed engineering workflow using third-party foundation-model services
Vendor	AetherForge AI GmbH (fictional)
Lifecycle stage	Restricted Pilot
Primary users	Mechanical engineers; product-design teams
Affected parties	Mechanical engineers; product users indirectly through downstream design decisions
Data categories	Confidential engineering IP; CAD files; technical specifications; materials data; simulation data; supplier component information
Human oversight	Competent engineer must review and validate outputs before prototyping or production; AI cannot authorize production design
Third-party involvement	Yes - hosted foundation-model/API capability integrated into Duckworks engineering workflow
Current impact indicator	High
Primary risk indicators	Unsafe or invalid design recommendations; hallucinated engineering information; IP leakage; automation bias; model/service change; third-party dependency
Assessment status	Baseline risk and impact assessment completed; control-validation actions remain
Approval status	Conditionally approved for restricted pilot only; production design use prohibited without required validation gates
Monitoring requirements	Design-validation failures; override/rejection rate; unsafe recommendation events; model/version changes; security events; IP/data-control exceptions
Assumption IDs	ASM-005; ASM-007; ASM-012; ASM-013; ASM-025

Control and monitoring interpretation

The monitoring requirements listed above are governance indicators for the synthetic portfolio. They should be converted into measurable thresholds, ownership, evidence sources, and escalation rules in the later AI Monitoring & Reassessment Standard.

Assumption traceability

Material implementation details and governance boundaries for this system are traceable through: ASM-005; ASM-007; ASM-012; ASM-013; ASM-025.

3.2 AI-002 - QuackBot

Pre-Production / Production Blocked | Internal impact indicator: High

AI ID	AI-002
System name	QuackBot
Business function	Customer Operations
Intended purpose	Answer common customer questions; retrieve technical product information; provide troubleshooting and warranty guidance; and escalate complex or sensitive cases
Business owner	Clara Duckley - Director of Customer Operations
Technical owner	Dr. Ada Duckfield - Head of Data & AI
AI technology	Generative AI; conversational AI; retrieval-augmented generation
Development model	Duckworks-managed customer chatbot and RAG layer using third-party hosted LLM services
Vendor	HelixRiver AI Services S.A. (fictional)
Lifecycle stage	Pre-Production / Production Blocked
Primary users	Customers; product users; customer-support personnel
Affected parties	Customers; product users; customer-service employees
Data categories	Customer contact and account information; support history; warranty information; chat transcripts; product documentation; troubleshooting knowledge
Human oversight	Uncertain, sensitive, safety-related, or out-of-scope interactions must be escalated to human customer-support staff
Third-party involvement	Yes - hosted LLM/model service; Duckworks manages application, knowledge retrieval, escalation, and monitoring
Current impact indicator	High
Primary risk indicators	Prompt injection; retrieval poisoning; hallucinated technical advice; customer misinformation; confidential-data leakage; excessive data retrieval; service dependency
Assessment status	Baseline risk and impact assessment completed; security and customer-impact gates remain open
Approval status	Production not approved pending prompt/RAG security testing, escalation controls, content boundaries, and monitoring
Monitoring requirements	Hallucination/error rate; escalation rate; unresolved customer complaints; prompt-injection events; sensitive-data exposure; retrieval-quality failures; vendor/model changes
Assumption IDs	ASM-005; ASM-010; ASM-012; ASM-013; ASM-026

Control and monitoring interpretation

The monitoring requirements listed above are governance indicators for the synthetic portfolio. They should be converted into measurable thresholds, ownership, evidence sources, and escalation rules in the later AI Monitoring & Reassessment Standard.

Assumption traceability

Material implementation details and governance boundaries for this system are traceable through: ASM-005; ASM-010; ASM-012; ASM-013; ASM-026.

3.3 AI-003 - FeatherForecast

Production / Operational | Internal impact indicator: Moderate

AI ID	AI-003
System name	FeatherForecast
Business function	Supply Chain & Manufacturing Planning
Intended purpose	Forecast product demand; inventory requirements; manufacturing volumes; component shortages; and supplier demand
Business owner	Tobias Duckman - Director of Supply Chain
Technical owner	Dr. Ada Duckfield - Head of Data & AI
AI technology	Predictive machine learning; time-series forecasting; demand analytics
Development model	Duckworks-configured forecasting models operating on a third-party analytics platform
Vendor	Northstar Planning Analytics GmbH (fictional)
Lifecycle stage	Production / Operational
Primary users	Supply-chain planners; procurement personnel; manufacturing planners
Affected parties	Duckworks operations; suppliers and logistics partners indirectly
Data categories	Demand history; inventory levels; purchase-order data; production schedules; supplier lead times; component availability; aggregated order information
Human oversight	Forecasts support decisions only; authorized managers approve purchasing and production commitments
Third-party involvement	Yes - third-party analytics/ML platform with Duckworks-owned configuration and business rules
Current impact indicator	Moderate
Primary risk indicators	Forecast drift; inaccurate demand prediction; poor data quality; inventory imbalance; supplier disruption; over-reliance on forecasts; vendor availability
Assessment status	Baseline risk and impact assessment completed
Approval status	Approved to continue in production with documented monitoring and manager approval for material commitments
Monitoring requirements	Forecast accuracy; forecast error by product family; drift; shortage prediction accuracy; inventory variance; manual override rate; data-quality exceptions
Assumption IDs	ASM-005; ASM-011; ASM-012; ASM-013; ASM-027

Control and monitoring interpretation

The monitoring requirements listed above are governance indicators for the synthetic portfolio. They should be converted into measurable thresholds, ownership, evidence sources, and escalation rules in the later AI Monitoring & Reassessment Standard.

Assumption traceability

Material implementation details and governance boundaries for this system are traceable through: ASM-005; ASM-011; ASM-012; ASM-013; ASM-027.

3.4 AI-004 - WingInspect Vision

Restricted Pilot | Internal impact indicator: High

AI ID	AI-004
System name	WingInspect Vision
Business function	Manufacturing & Quality
Intended purpose	Analyze production-line images to identify missing components; assembly problems; cracks; surface defects; and other potential quality issues
Business owner	Henrietta Duckwell - Director of Manufacturing
Technical owner	Dr. Ada Duckfield - Head of Data & AI
AI technology	Computer vision; image classification; defect detection
Development model	Duckworks manufacturing-quality workflow using third-party computer-vision components
Vendor	VisiCore Industrial AI GmbH (fictional)
Lifecycle stage	Restricted Pilot
Primary users	Manufacturing inspectors; quality engineers
Affected parties	Manufacturing inspectors; production teams; downstream product users
Data categories	Manufacturing-line images; component images; product identifiers; batch records; defect labels; quality-inspection results
Human oversight	Qualified human inspectors retain final acceptance/rejection authority; AI flags potential defects but cannot independently release products
Third-party involvement	Yes - third-party computer-vision runtime/model components integrated into Duckworks quality systems
Current impact indicator	High
Primary risk indicators	False negatives; missed safety-relevant defects; false positives; performance drift; image-quality sensitivity; automation bias; adversarial or abnormal inputs
Assessment status	Baseline risk and impact assessment completed; validation actions remain
Approval status	Conditionally approved for restricted pilot only; no unvalidated safety-critical reliance
Monitoring requirements	False-negative rate; false-positive rate; defect recall; inspector override rate; image-quality failures; drift; missed-defect incidents; model/version changes
Assumption IDs	ASM-005; ASM-008; ASM-012; ASM-013; ASM-028

Control and monitoring interpretation

The monitoring requirements listed above are governance indicators for the synthetic portfolio. They should be converted into measurable thresholds, ownership, evidence sources, and escalation rules in the later AI Monitoring & Reassessment Standard.

Assumption traceability

Material implementation details and governance boundaries for this system are traceable through: ASM-005; ASM-008; ASM-012; ASM-013; ASM-028.

3.5 AI-005 - DuckTalent AI

Pre-Deployment / Deployment Blocked | Internal impact indicator: Critical

AI ID	AI-005
System name	DuckTalent AI
Business function	Human Resources
Intended purpose	Parse CVs; extract qualifications and experience; compare applicants with predefined job criteria; summarize applications; rank candidates; and recommend candidates for human review
Business owner	Beatrice Van Duck - Chief People Officer
Technical owner	Dr. Ada Duckfield - Head of Data & AI
AI technology	Machine learning; NLP; ranking and recommendation; recruitment decision-support
Development model	Third-party recruitment AI SaaS configured using Duckworks job criteria and workflow rules
Vendor	MeritPath HR Technologies S.A. (fictional)
Lifecycle stage	Pre-Deployment / Deployment Blocked
Primary users	Recruiters; hiring managers; HR personnel
Affected parties	Job applicants; recruiters; hiring managers
Data categories	Applicant identity and contact data; CVs; employment history; qualifications; education; skills; application metadata; recruiter annotations; job criteria
Human oversight	AI may rank and recommend candidates but cannot autonomously reject, shortlist, hire, or issue final employment decisions; meaningful recruiter review required
Third-party involvement	Yes - externally hosted recruitment AI SaaS handling applicant personal data
Current impact indicator	Critical
Primary risk indicators	Discrimination; disparate candidate outcomes; inappropriate proxy variables; privacy; ranking errors; explainability limitations; automation bias; lack of contestability; employment impact; regulatory exposure
Assessment status	Baseline risk and impact assessment completed; enhanced legal, privacy, fairness, and control validation remains required
Approval status	Do not deploy in current state; deployment blocked until critical risk is reduced and enhanced governance gates are satisfied
Monitoring requirements	Selection-rate disparities; ranking consistency; human override rate; candidate complaints; contested decisions; model drift; data-quality issues; unexplained recommendation rate; vendor/model changes
Assumption IDs	ASM-005; ASM-006; ASM-012; ASM-013; ASM-029

Control and monitoring interpretation

The monitoring requirements listed above are governance indicators for the synthetic portfolio. They should be converted into measurable thresholds, ownership, evidence sources, and escalation rules in the later AI Monitoring & Reassessment Standard.

Assumption traceability

Material implementation details and governance boundaries for this system are traceable through: ASM-005; ASM-006; ASM-012; ASM-013; ASM-029.

3.6 AI-006 - PondGPT

Restricted Pilot | Internal impact indicator: High

AI ID	AI-006
System name	PondGPT
Business function	Enterprise IT & Employee Productivity
Intended purpose	Provide employees with drafting; summarization; research; knowledge retrieval; coding assistance; meeting summaries; and answers to internal process questions
Business owner	Oliver Duckett - Head of IT & Cloud
Technical owner	Oliver Duckett - Head of IT & Cloud
AI technology	Generative AI; enterprise LLM assistant; retrieval-augmented generation
Development model	Duckworks enterprise AI application using a third-party hosted LLM with Duckworks-controlled identity, retrieval, and access enforcement
Vendor	LanternMind Enterprise AI Ltd. (fictional)
Lifecycle stage	Restricted Pilot
Primary users	Duckworks employees
Affected parties	Employees; internal data owners; customers or other individuals indirectly where their information is contained in permitted source material
Data categories	Internal documents; policies; procedures; source code; meeting content; employee identity and access metadata; permitted customer and operational information
Human oversight	Users remain responsible for outputs; source-system permissions must be enforced; privileged or excluded repositories cannot be made accessible through AI retrieval
Third-party involvement	Yes - hosted enterprise LLM service integrated with Duckworks identity and internal knowledge sources
Current impact indicator	High
Primary risk indicators	Prompt injection; indirect prompt injection; retrieval poisoning; cross-user data leakage; excessive permissions; sensitive-data disclosure; unsafe generated code; hallucination; third-party dependency
Assessment status	Baseline risk and impact assessment completed; architecture and security controls require further validation
Approval status	Conditionally approved for restricted pilot only; broader rollout blocked until access, logging, RAG security, and acceptable-use controls are validated
Monitoring requirements	Prompt-injection detections; unauthorized retrieval attempts; sensitive-data events; hallucination/user-feedback rate; unsafe code findings; access-control failures; vendor/model changes
Assumption IDs	ASM-009; ASM-012; ASM-013; ASM-030

Control and monitoring interpretation

The monitoring requirements listed above are governance indicators for the synthetic portfolio. They should be converted into measurable thresholds, ownership, evidence sources, and escalation rules in the later AI Monitoring & Reassessment Standard.

Assumption traceability

Material implementation details and governance boundaries for this system are traceable through: ASM-009; ASM-012; ASM-013; ASM-030.

4. Assumption Traceability

The table below combines the existing assumptions directly referenced by the six inventory records with six new implementation/vendor assumptions. New assumptions are intentionally Open. They must not be represented as validated facts until the listed evidence is obtained.

ID	Category	Assumption	Status	Materiality	Why it matters	Validation / evidence	Origin
ASM-005	Human accountability	Humans retain formal accountability for employment, product release, quality, procurement, and material customer decisions.	Open	Critical	Human oversight affects impact, regulatory, and residual-risk conclusions.	Validate per system	Existing Assumptions Register
ASM-006	DuckTalent purpose	DuckTalent parses, compares, ranks, and recommends job applicants but does not autonomously issue final rejection or hiring decisions.	Validated	Critical	Materially affects employment impact and legal classification analysis.	DuckTalent AIA	Existing Assumptions Register
ASM-007	DuckDesign use	DuckDesign outputs are advisory and require competent engineer review before prototyping or production.	Open	Critical	Safety and product risk depend on meaningful engineering validation.	Pilot operating procedure	Existing Assumptions Register
ASM-008	WingInspect use	WingInspect flags defects but qualified human inspectors retain final acceptance/rejection on authority.	Open	Critical	Quality/safety exposure changes if the model becomes autonomous.	Manufacturing procedure	Existing Assumptions Register
ASM-009	PondGPT access	PondGPT uses enterprise access controls and should not grant users access to documents they could not otherwise access.	Open	Critical	Controls cross-user leakage and privilege amplification.	Architecture evidence	Existing Assumptions Register
ASM-010	QuackBot escalation	QuackBot can escalate uncertain, sensitive, or safety-relevant interactions to human support staff.	Open	High	Reduces customer harm and supports oversight.	Release design	Existing Assumptions Register
ASM-011	FeatherForecast decisions	FeatherForecast is decision support; purchasing and production commitments require authorized manager approval.	Open	Medium	Limits direct automation risk.	Supply chain SOP	Existing Assumptions Register
ASM-012	Third-party mix	Duckworks uses a combination of internally developed AI components and third-party models/services.	Validated	High	Requires both development governance and supplier risk controls.	Architecture scenario	Existing Assumptions Register
ASM-013	Data	AI systems may process confidential IP and, for selected systems, customer, employee, or applicant personal data.	Validated	High	Drives privacy, security, and data governance controls.	Inventory	Existing Assumptions Register

ID	Category	Assumption	Status	Materiality	Why it matters	Validation / evidence	Origin
ASM-025	DuckDesign vendor architecture	DuckDesign AI uses a Duckworks-developed engineering workflow integrated with the fictional AetherForge AI GmbH hosted model service; Duckworks engineering data is contractually excluded from provider model training.	Open	High	Determines third-party, IP, confidentiality, training-data-use, and supplier-control requirements.	Vendor contract; architecture diagram; data-use terms	New synthetic inventory assumption
ASM-026	QuackBot vendor architecture	QuackBot uses the fictional HelixRiver AI Services S.A. hosted LLM, while Duckworks controls the RAG knowledge base, customer-support workflow, and escalation logic; provider reuse of Duckworks prompts/content for training is prohibited.	Open	High	Determines customer-data exposure, supplier controls, RAG accountability, and data-use restrictions.	Vendor contract; solution architecture; retention/training terms	New synthetic inventory assumption
ASM-027	FeatherForecast platform	FeatherForecast uses the fictional Northstar Planning Analytics GmbH ML platform, with Duckworks controlling datasets, forecasting configuration, thresholds, and operational decisions.	Open	Medium	Clarifies provider dependency while retaining Duckworks accountability for data and operational decisions.	Platform architecture; configuration record; supplier agreement	New synthetic inventory assumption
ASM-028	WingInspect imaging scope	WingInspect Vision uses fictional VisiCore Industrial AI components; production cameras are intended to capture products/components rather than perform employee surveillance or biometric identification.	Open	High	Materially affects privacy, workforce-impact, security, and regulatory screening.	Camera field-of-view review; system design; privacy assessment	New synthetic inventory assumption
ASM-029	DuckTalent vendor and decision boundary	DuckTalent AI is provided by fictional MeritPath HR Technologies S.A.; special-category attributes are not intended ranking features, and the system cannot autonomously reject or hire an applicant.	Open	Critical	Affects fairness testing, privacy, legal classification, human oversight, and deployment decision.	Vendor documentation; feature inventory; workflow configuration; HR procedure	New synthetic inventory assumption

ID	Category	Assumption	Status	Materiality	Why it matters	Validation / evidence	Origin
ASM-030	PondGPT enterprise controls	PondGPT uses fictional LanternMind Enterprise AI Ltd. under an enterprise arrangement providing tenant isolation and no provider training on Duckworks content; retrieval permissions inherit authorization from source systems.	Open	Critical	Controls cross-user leakage, privilege amplification, third-party data use, and deployment scope.	Contract; architecture evidence; access-control tests; retrieval security test	New synthetic inventory assumption

4.1 New Assumption Change-Control Rule

Any new assumption that proves false, materially changes, or cannot be validated should trigger an inventory update and, where appropriate, a new impact assessment, risk assessment, legal triage, third-party review, security/privacy review, or governance approval. This follows the existing Duckworks assumption-management approach.

5. Governance Gates and Current Decisions

These decisions reproduce the current Duckworks portfolio position. They are governance / lifecycle gates, not legal-compliance conclusions.

AI ID	System	Current gate	Impact	Minimum acceptance conditions
AI-001	DuckDesign AI	Restricted pilot only	High	Competent engineer review; design validation; IP/data controls; no autonomous release to production design.
AI-002	QuackBot	Production blocked pending gates	High	Prompt/RAG security testing; safe escalation; content boundaries; monitoring; customer-impact safeguards.
AI-003	FeatherForecast	Continue with monitoring	Moderate	Manager approval for material commitments; drift/performance monitoring; data-quality controls.
AI-004	WingInspect Vision	Restricted pilot only	High	Human inspector remains final authority; false-negative testing; no unvalidated safety-critical reliance.
AI-005	DuckTalent AI	Do not deploy in current state	Critical	Enhanced legal/privacy/fairness analysis; meaningful human review; bias testing; transparency/contestability ; critical risk reduced.
AI-006	PondGPT	Restricted pilot only	High	Enterprise access enforcement; sensitive repository exclusions; prompt/RAG security; logging; acceptable-use controls.

6. Data Dictionary

Inventory field	Definition
AI_ID	Unique Duckworks AI inventory identifier.

Inventory field	Definition
System_Name	Approved fictional name of the AI system/use case.
Business_Function	Primary business area accountable for the use case.
Intended_Purpose	Documented purpose and functional boundary of the AI system.
Business_Owner	Named first-line owner accountable for business outcomes and use-case controls.
Technical_Owner	Named owner accountable for architecture, implementation, operation, and technical evidence.
AI_Technology	Primary AI/ML technology used by the system.
Development_Model	Synthetic description of build/buy/integration approach.
Vendor	Fictional third-party AI/model/platform provider introduced for portfolio realism.
Lifecycle_Stage	Current system lifecycle / governance-gate state.
Primary_Users	People or teams directly using/interacting with the system.
Affected_Parties	People/groups who may be materially affected directly or indirectly.
Data_Categories	Primary categories of business, technical, and personal data processed.
Human_Oversight	Required human review, decision authority, override, escalation, or accountability boundary.
Third_Party_Involvement	Nature of external model, platform, SaaS, or API involvement.
Current_Impact_Indicator	Duckworks internal portfolio impact/risk indicator; not an EU AI Act legal classification.
Primary_Risk_Indicators	Material risk themes that drive governance and monitoring.
Assessment_Status	Status of baseline impact/risk assessment and remaining validation activity.
Approval_Status	Current governance decision or production restriction.
Monitoring_Requirements	Key performance, security, rights, safety, and change indicators to monitor.
Assumption_IDs	Traceability to controlled assumptions supporting material facts or unknowns.

7. Source Basis

The inventory is grounded in the existing Duckworks portfolio artifacts. The source list below identifies how each provided document was used. Fictional vendors and new implementation details are not source-derived facts; they are controlled synthetic assumptions recorded separately.

Source area	Duckworks artifact	Use in this inventory
Business Scenario	Duckworks AI Governance Project - Business Scenario	Defines the six registered use cases, purposes, portfolio IDs, governance problem, and system-level context.
Organization Profile	Duckworks - Fictional Organization Profile	Defines the fictional organization, AI environment, and named executives/system context.
Stakeholder Register	Duckworks AI Governance Project - Stakeholder Register	Defines named business/technical owners and affected stakeholder groups.
Assumptions Register	Duckworks AI Governance Project - Assumptions Register	Defines existing controlled assumptions ASM-001 through ASM-024 and change-control rules.
Acceptance Criteria	Duckworks AI Governance Project - Acceptance Criteria	Defines lifecycle/release gates and impact levels for the seven baseline entries.
Risk Methodology	Duckworks AI Risk Classification & Assessment Methodology v1.0	Defines internal Low/Moderate/High/Critical ratings and separates enterprise risk ratings from legal classification.
Project Objectives	Duckworks AI Governance Project - Project Objectives	Defines minimum inventory fields, traceability, monitoring, ownership, and evidence expectations.
Scope	Duckworks AI Governance Project - In-Scope and Out-of-Scope Items	Defines inventory scope and portfolio boundaries, including synthetic-data-only requirement.

8. Portfolio Disclaimer

Duckworks, Project W.I.N.G., all personnel, vendors, AI systems, datasets, risks, decisions, controls, and evidence referenced in this report are fictional and were created solely for educational and professional portfolio purposes. This inventory uses only synthetic/project information and public or fictional source material. It does not constitute legal advice, certification evidence, a conformity assessment, or a determination of regulatory applicability.
